

## ▼ Import Libraries

```
# Import necessary libraries
import pandas as pd
import numpy as np

import plotly.express as px
import plotly.graph_objects as go

from sklearn.metrics import mean_absolute_error, mean_squared_error, r2_score
from sklearn.model_selection import train_test_split
from sklearn.linear_model import LinearRegression
```

## ▼ Data Collection

```
# Import required libraries
import pandas as pd
from google.colab import files

# Upload CSV file from laptop
uploaded = files.upload()

# Uploaded data is in dictionary form; convert keys to a list and get the
# first filename
file_name = list(uploaded.keys())[0]

# Read CSV file into DataFrame
df = pd.read_csv(file_name)

# OR
# df=pd.read_csv("/content/advertising.csv")

# Print first 5 rows of the dataset
df.head()
```

Choose Files advertising.csv  
**advertising.csv**(text/csv) - 4062 bytes, last modified: 3/20/2025 - 100% done  
 Saving advertising.csv to advertising (1).csv
